This book is well worth the money! I’m a nursing student and for my first care plan I made an 80.5. That was without any nursing diagnosis book just using google and my foundations book. Another student told me about this book, she made a 99 on her first care plan. After I purchased the book I made a 98 on my next care plan! It teaches you a lot and breaks it down brilliantly!

This textbook was SO helpful in completing my nursing care plans and concept maps during nursing school. I purchased it because it was required for school, but I would recommend it to any nursing

student (even if not a required text).

Most of the students and professors complain about this book. I haven't totally gotten the full scoop on why they aren't appealed by it but personally the organization is terrible in it. It is hard to find the diagnosis you are looking for. I would recommend with caution.

This book was the recommended one for writing our care plans. It's not easy to align the goals to interventions. I'm ordering the Gulanick version and will use both to cross check.

This book came in as described by the seller--new, no wrapper. I was hesitant to purchase this as the wrapper had been removed, but there are no markings, highlights, the corners aren't bent or worn, and the binding is in perfect condition. I can't find any signs of it being used. I was thrilled to find it on my doorstep on the next business day--and I only had standard shipping! Great purchase, reliable seller. Thank you! :)

The book was here a lot sooner than expected. I had no problems. The book was exactly as descripted. Honestly, so surprised and excited.

It has all the rationales for nursing interventions and etc. It's super informative

For some reason I did not open this book my first semester of nursing school. I sure wish I had, because it's really helpful! It lists all the NANDA diagnoses, interventions, and goal suggestions. This is a very useful book.
