Synopsis

Chelation Therapy in the Treatment of Metal Intoxication presents a practical guide to the use of chelation therapy, from its basic chemistry, to available chelating antidotes, and the application of chelating agents. Several metals have long been known to be toxic to humans, and continue to pose great difficulty to treat. These challenges pose particular problems in industrial settings, with lead smelting known to be associated with hemopoietic alterations and paralyses, and the inhalation of mercury vapor in mercury mining being extremely detrimental to the central nervous system. Clinical experience has demonstrated that acute and chronic human intoxications with a range of metals can be treated efficiently by administration of chelating agents. Chelation Therapy in the Treatment of Metal Intoxication describes the chemical and biological principles of chelation in the treatment of these toxic metal compounds, including new chelators such as meso-2,3-dimercaptosuccinic acid (DMSA) and D,L-2,3-dimercapto-1-propanesulfonic acid (DMPS).Presents all the current findings on the potential for chelation as a therapy for metal intoxicationPresents practical guidelines for selecting the most appropriate chelating agentIncludes coverage on radionuclide exposure and metal storage diseasesDescribes the chemical and biological principles of chelation in the treatment of toxic metal compounds

Book Information

Hardcover: 388 pages
Publisher: Academic Press; 1 edition (May 3, 2016)
Language: English
ISBN-10: 0128030720
ISBN-13: 978-0128030721
Product Dimensions: 6 x 1 x 9 inches
Shipping Weight: 1.8 pounds (View shipping rates and policies)

Customer Reviews

"It surpasses its goal of showcasing the recent developments in the use of chelating agents for metal overexposure and metal storage diseasesÃ¢â ¬Â¦This is a valuable addition to the field of

metal toxicity and a handy resource for clinicians to gain an understanding of metal toxicity, diagnosis, and treatment. Score: 95 - 4 Stars" --Doody's, Chelation Therapy in the Treatment of Metal Intoxication

Chelation Therapy in the Treatment of Metal Intoxication presents a practical guide to the use of chelation therapy, from its basic chemistry, to available chelating antidotes, and the application of chelating agents. Several metals have long known to be toxic to man, and continue to pose great difficulty to treat. This poses particular problems in industrial settings, with lead smelting known to be associated with hemopoietic alterations and paralyses and the inhalation of mercury vapor in mercury mining being extremely detrimental to the central nervous system. Clinical experience has demonstrated that acute and chronic human intoxications with a range of metals can be treated efficiently by administration of chelating agents.
