Customer Reviews

As an allergist-immunologist, I see many patients who seek evaluation for conditions thought to be related to insect stings or bites. This book is an especially useful compendium of the typical and atypical responses to these insects and other arthropods, and the entomology is a great help for those who are distant from college zoology courses. … This text has come of age at a time when it is needed most. It will especially be valued by health care providers who find themselves in unknown territory, both geographically and medically.- From the ForewordRichard D. deShazo, M.D.University of Mississippi Medical Center

Jerome Goddard is currently an associate extension professor of medical and veterinary entomology in the Department of Biochemistry, Molecular Biology, Entomology, and Plant Pathology at Mississippi State University. He is also an affiliate faculty member in the School of Medicine, The

University of Mississippi Medical Center, in Jackson. His main research interests are the ecology and epidemiology of tick-borne diseases, the health and medical impacts of bed bugs, and mosquitoes and mosquito-borne diseases. --This text refers to an out of print or unavailable edition of this title.

Excellent reference for quick access to essential information concerning the entomology, phylogenetic classification, & tips on identification of pertinent arthropods along side the description & treatment of pathological conditions encountered with them. There is a plethora of black & white and color drawings and photos of the arthropod and clinical conditions. There is also a chapter on delusions of parasitosis.There is just enough practical information for busy clinicians without having to spend much time to wade through too much information. There are many references at for more details.
