Robert W. Christopherson is Professor Emeritus of Geography, having taught 30 years at American River College, and is the author of the leading physical geography texts in the US and Canada. Christopherson attended California State University-Chico for his undergraduate work and received his Masters in Geography from Miami University-Oxford, Ohio. Geosystems evolved out of his teaching notes and was his graduate thesis; this is his lifeÃ¢â ¬â„¢s work. He founded the geography program of American River College faculty. His wife BobbÃƒÂ© is his principal photographer and has provided more than 300 exclusive photos for each of his books. Together

they have completed nine polar expeditions (most recently in spring 2010). They attended the 2004 Arctic Climate Impact Symposium in Reykjavik, Iceland to acquire photo and video coverage and research. Robert is the recipient of numerous awards, including the 1998 and 2005 Text and Academic Authors Association Textbook Award for Geosystems and Elemental Geosystems, 4e, respectively. He was selected by American River College students as "Teacher of the Year" and received the American River College Patrons Award. Robert received the 1999 Distinguished Teaching Achievement Award from the National Council for Geographic Education and the Outstanding Educator Award from the California Geographical Society in 1997. The Text and Academic Authors Association presented him with its Presidents' Award in 2005. Among many other things, Robert has been deeply involved in the development of PearsonÃ¢â ¬â„¢s Geoscience Animation Library, and he led the editorial board of Rand McNallyÃ¢â ¬â„¢s GoodeÃ¢â ¬â„¢s World Atlas, 22e.

Used at Western Washington University in 2010. This class was a general requirement for me so not in my major or area of interest; but the book was fine and helped me pass the class.Like most people, I rely on honest product reviews to make purchase decisions. Because the experience of others has been so helpful to me, I try to provide honest, helpful reviews to assist other shoppers in selecting the right products for them. I hope my review has been helpful to you!

Enjoy the unbound edition better than other textbooks. Allows for easy photocopy or scanning of graphics, and you can take out the glossary and index to use as separate quick reference instead of flipping back and forth. The expense of the book was far less and I am probably going to save it as a future reference book because it doesn’t cost me nearly as much. The textbook is good, easy to read, and has lots of helpful diagrams.

I love for selling textbooks. They are so much cheaper than the campus bookstore. I ended up getting this book for 1/3 of the price the campus bookstore was selling for. The book itself is very informational and gets to the point. I love that it’s not too big of a book as some textbooks are quite heavy. The CD-Rom that came with it is awesome too and very informational. I went into this class knowing nothing of this topic and came out feeling like I could be the weather girl for the local news station.

I ordered and it did come with the access code. I used it a couple times but I would not say it was

crucial and it did not really help me with the text. I liked the three-hole-punched idea but a few pages ripped out because it is thin paper. It is a nice idea and helps save money though. Overall I had a great experience with the text. I just do not know what to do with it now since I used the access code.

Who doesn’t love a hundred something dollar school book that is a fraction of the price and you don’t even need to keep? That said, the book was great for the class. Book is in good condition and was interesting to read. I ended up ’re ting this book, so so I’m glad I don’t have to go all the way down to the school to sell it. Definitely worth it.

the online version is terrible. it is not in PDF format to scroll to pages, it only allows one page at a time, hard to use for studying. I’ve tried to call for help but was transferred to a voicemail. Customer service is terrible.

Because it was used in the BEST class I took in college. My teacher was a tad...crazy and was in LOVE with geology. She made is interesting (when I attended) and was always willing to help; her tests came STRAIGHT from the powerpoints and the bonus questions ALWAYS came from the last page of each chapter! BOMB!

It’s a textbook.....
