Loved it. It made me very interested in history to a point that I decided to go to Egypt and see all the ancient sites for myself.I has been about a year since I last read it so my memory of its exact content is dim.The only criticism I can think of for it is that there was a moment or two in the book where he presents data about different ancient cultures and proceeds to use the similarities within them to suggest a hypothesis.This is actually the majority of the book and they are always very well thought out and valid points. There were only I a couple of moments where I felt that an idea of his(Hancock) was a stretch. I have no academic background myself so I just went by a gut feeling.Other than that I recommend this book to anyone who enjoys a book of any kind.The scenes

are engaging. Its thrilling to learn about ancient history and even more thrilling to see different ways it could be looked at.

This reads like a good detective novel, the author pulls many, many unexplained peculiar and curious facts together and creates a theory that really does tie them together. I think the future will bring verification of much of what he says here...

How utterly fascinating ! To think that a high civilization has been lost to history, we might indeed be a species with amnesia. I feel Hancock is making a contribution to humanity with this book. He has done extensive research and you can tell that this is his passion. Some of the facts and enigmas he presents here should be taught in school. Where do we come from ?This book opened my eyes to ancient history, astronomy and astrology. It was worth every penny.

The author has a keen sense of how to unfold his entire theory over 500 pages so that you leave the book convinced of the strong possibility that it is true and want to read more about the subject of lost civilizations. I can’t wait to read "When the Sky fell" once its released (by Ruth Ann-Flems)

Im totally engrossed in the facts of this thick book of facts laid out so well. It is older so it has not been tainted by modern popular theories of the sort. This is one of the original researchers of these theories giving it the fresh insight needed to help you understand how the conclusions and evidence prove todays popular theories which will soon become common knowledge.

Now here is a book that is well worth reading. it pushes a lot of buttons as too how old is our civilisation and what has happened down thru the ages. We are not as clever as prior civilisations and we are heading for a major down fall/ earth change and no one is prepared for it. I have suspected that something major took place around 13,000 years ago by a visit to Lake Titicaca in Peru. Just how old are the pyramids - not the 5000 years as the Egyptians think but much older

This book blew my mind more than I would like to admit. It’s a shame that I don’t have the capacity to keep it all inside my head. Such a well written book and a lot to be known about south and central american culture as well as egyptian.

I just read this book on a vacation to Turkey, I had read Guns Germs & Steal (very scientific and

similarly captivating) before it.Now what is most interesting is that thin line between science, imagination, controversy, and pseudoscience that Mr Graham walks on. He retains his credibility though all the way to the end. Whether you agree with his views or not, his reasoning can provoke any mind into rethinking and rethinking and rethinking.Needless to say how captivating his method is, one has to value the efforts of a man that walks the walk, and doesn't just sit behind a desk posing information & ego at people.Thanks for the great book!
