I find it funny that I am giving an "I love it" rating to a textbook, but this is a good one. The authors have organised the book in a logical order presenting information and concepts so that concepts likely to be unfamiliar to the reader are not introduced till all supporting concepts are taught. There are helpful charts throughout the book where appropriate. I also found the questions at the end of each chapter to be beneficial for encouraging learning. This book focuses specifically on government accounting as the title indicates, however it points out the differences and similarities to private sector accounting where they exist and in a manner which acts to clear up any confusion before it sets in. Language is easy to read and easy to understand and all industry specific terminology is defined when used. Introductory, but in-depth text.

It is missing a couple chapters towards the end about Nonprofits and Auditing them which is definitely on the CPA exam. Take the burn and buy the more expensive hardback because it won’t be missing material.

The binding of the book is falling apart, and is only held together by one page.

Ugg. Made it through the course thanks to the book.

Bought this book for a class. If I was an instructor this would not be my first choice for a textbook. It's too compact and this makes it boring. The information is not illustrated frequently enough and because there are no solutions to the end of chapter problems, students are not able to progress independently.

Book was so beat up it was almost impossible to use

The book looks like it is falling apart.

Very Bad condition.
