Synopsis

When AIDS was first reported in 1981, scientists disagreed about what caused the disease and how it was spread. Controversies continued when two different research groups claimed credit for identifying the virus called HIV as the cause of AIDS in 1984. These and related debates shook the scientific world and affected the development of AIDS research and prevention.

Customer Reviews

"Because of the even-handed presentation, the title makes a strong and lasting impression. The writings are well chosen. A thoughtful and well-delineated addition." -- School Library Journal (April 2003) (School Library Journal 20030401)"This book will give students an understanding of a difficult time in American history." -- School Library Journal (September 2002) (School Library Journal 20020901)"This collection of primary-source material presents a well-balanced treatise on who knew what, and when, and who was responsible. This title deals with a debate that is seldom addressed." -- School Library Journal (July 2002) (School Library Journal 20020701)"As with books in the long-running Opposing Viewpoints series, the excerpts here clearly express opposing opinions on an issue...The effect of the entire volume is to create an informative, many-sided representation." -- Booklist (May 2002) (Booklist 20020501)
