Customer Reviews

"This book is excellent. Haematopathology can be daunting and the study of bone marrows especially so. The authors deserve credit for producing a book that is not only easy to read and understand, but is also a compact, detailed and exhaustive guide.Ã Â I would highly recommend it to trainees and consultants in haematology and histopathology alike. Each and every department that reports bone marrows should have it in their library, preferably within easy reach." (ACP News,

December 2010) Ã¢â ¬Å“This is one of only a few references that effortlessly integrate the entire process critical for accurate bone marrow interpretation. It is a must for practicing hematopathologists.Ã¢â ¬Â• (DoodyÃ¢â ¬â„¢s, "Trainee medical and laboratory staff in haematology and histopathology will all derive great benefit from using this publication to aid their studies. The logical approach, concise text, and abundance of illustrations make this book an important addition to any reading list used as preparation for examinations. In short, this is a seriously good book!" (The Bulletin of the Royal College of Pathologists, July 2010) "Bone Marrow Pathology is illustrated very well and contains clear and straightforward description of the broad spectrum of bone marrow pathology. This book is a highly professional overview for almost all possible bone marrow pathologies. It is of great help to hematopathologist but I wonder why on line as well as offline access is not offered with this book

It is the most usefull and practical book about bone marrow pathology that I ever read. It includes allmost all disease entities (malignant and non-malignant) that pathologis is facing in his daily diagnostical peripheral blood and bone marrow investigations. Every entity is described in great detail, separetely concentrating on cytology of peripheral blood, cytology and histology of bone marrow. This is quit unique way of entity descriptions and I think it is very usefull, because it gives to

the reader complete and integrated picture of cytological and histological findings. Many other books about the bone marrow pathology does not say anything about the cytology of peripheral blood. There are few things hovewer, that could be delt in more detail. One of such things is that, there is to little comments on differential diagnosis. The other thing is that pictures could also be of better quallity. Despite those few missing things, this book is No1. descktop reference for pathologist who is in charge of daily bone marrow investigations.
