Synopsis

AIDS, Malaria, Cholera, Tuberculosis and Cystic Fibrosis: this book is about explaining what causes these diseases and what cures or treatments are available. As they represent different types of disease in each case; I believe someone reading this will gain the understanding of not only AIDS, malaria, cholera, TB and cystic fibrosis; but also many other diseases that have the same or similar basis.This book will particularly benefit students of biology and medicine; but is written in understandable language for non-students; who may just have an interest in these diseases. I hope that by reading this book you gain an insight into the fascinating subject of the biology of these illnesses and that what you learn will benefit you and others around you.
