Agnieszka Biskup is a science writer and editor based in Chicago. She is a former editor for the science section of the Boston Globe as well as the children's science magazine Muse. In addition to children's books, she has also written many articles for newspapers, magazines, and websites. Her books have received awards from Learning magazine, the Association of Educational Publishers, and the Society of School Librarians International. Her book Football: How It Works (Capstone Press, 2010) was a Junior Library Guild selection.

I purchased the entire series of these books for my first grader son after he found one at the local library. They are an easy to read graphic novel format with the same look as superhero comics. Using bright colors, action scenes and simple language they explain some basic scientific concepts in a way that children can not only understand but enjoy. As I hoped they got my son interested in knowing more about the topics. Definitely worth the money and fun to read even for adults

unfamiliar with the topics themselves.

The idea of these books is great, but they need to make the book longer with more of a plot so that children have time to get into the adventure and learn the information.

My boys are loving this fun book to complement their science education.

My wife uses these in her 5th grade classroom and the students really like them. She found it especially useful with reluctant readers.

bought this for my nephew. He loves science, and at age 9 this is perfect for him. It is in a comic book style that will attract his attention.

Great way of explaining complex concepts

Good but quite elementary.

My son has been able to very explain science techniques since reading these series and finds great joy in reading them. He’s now eager to get involved in science projects without us having to fuss at him.
