Customer Reviews

(copied from my review of the NW version of Yosemite maps)I was very surprised by the quality. When I first opened the package, I was ready to call and complain because the material felt just like normal paper. I re-read the description on the store page -- yep, water-proof, tear resistant, etc. I took that as a challenge and put the seemingly normal paper map under the faucet and blasted it -- only to watch the water glide right off. So I grabbed the corner of the map and tried to rip it, and it stretched a little after applying pressure. Whoa. I don't know what these maps are made of, but I'm impressed. The color is great too, I'm sure the maps themselves are accurate because they are highly rated in that regard when I checked elsewhere. I didn't expect the quality of the actual material. You want these maps.

I like to previsualize any hike I may like to take at any National Park I plan on visiting. These maps become one of my study tools to do just that. In the case of this map and its counterparts, I can look at distances and elevation differences for the areas I'm interested in going. For a trip I will be going on in 2 months, I will only be in Yosemite for 3 days and already have over a week's worth of ideas. When I get back home with a few thousand pictures and GPS tracks, I can use the map to relive the experience and possibly plan for a future trip.

This is an amazing and more-than-welcome trail map. My only wish is that the group of central Sierra maps would fit together like puzzle pieces. I happen to be location challenged (I.e. I never quite know where I am) and need the matching of scale and place in the big picture to move from one to the next.

Great buy.

As advertised; inexpensive and good quality

great

I purchased this map because it claims to have The Hoover Wilderness. It has very little of the Hoover Wilderness area around Yosemite.

It's a very nice map but if you are staying in town just get a map from the visitor center.
