Synopsis

The 100+ Series, Algebra II, offers in-depth practice and review for challenging middle school math topics such as factoring and polynomials; quadratic equations; and trigonometric functions. Bonus activities on each page help extend the learning and activities, making these books perfect for daily review in the classroom or at home. Common Core State Standards have raised expectations for math learning, and many students in grades 6Ã¢â ¬â œ8 are studying more accelerated math at younger ages. The 100+ Series provides the solution with titles that include over 100 targeted practice activities for learning algebra, geometry, and other advanced math topics. It also features over 100 reproducible, subject specific, practice pages to support standards-based instruction.

Customer Reviews

An essential supplement to classroom instruction, 100+ practice activities will keep studentsÃ¢â ¬â„¢ skills sharp while preparing them for the next level of math study. This book provides all the instruction, practice, and review students need to understand algebra II from the beginning of the year to the end. Step-by-step explanations, complete practice problems, and fun extension activities help students in grades 8 and up master even the most challenging topics.

This book is designed for practice, and not for kids to learn on their own. For this purpose, it is excellent. The problems are a good mix of simple to not-so-simple problems in most categories.

Highly recommended.

My Husband and I are raising our Grandson/son now and we haven’t had to do any type of Math in 20 some years so we need to learn the new core Algebra so maybe we don’t feel as doubt as we are it’s a try and the Books are GREAT but the people are just to old, I think we need a tutor !!

Better skill builder than the homework sent home for vacation.

Perfect for my 10th grader.

there are some printing errors and the some of the examples are not clear.

Prompt delivery, great quality

Now the standard
