Customer Reviews

For me writing this book was an opportunity to share the passion I have for aviation and the hobby of building plastic model airplanes. I wanted to include as many pictures as possible to provide examples and help illustrate this guide designed to serve as a reference to the newcomer to the hobby. In this book I share several techniques, processes and recommendations that will help the modeler achieve great results right from the beginning. My hope is that by the time the reader has finished going through the pages of this book, I was able to inspire the reader and spark his or her interest in this amazing hobby.

This book is an introduction to the hobby of building scale model aircraft. It is a guide for the new comer to the hobby and is illustrated with many color photographs. The book is oriented primarily to kids and young people, but it is also a good read for adults as well. The book lists all the tools and materials needed by the new modeler and it explains the basic steps in building a plastic model airplane. The book also provides helpful tips and suggestions and shows many examples in the form of photographs and narrative. The book aims to inspire new modelers.
