## Customer Reviews

Jason has been a keen gardener for over twenty years, having taken on numerous weed infested patches and turned them into productive vegetable gardens. One of his first gardening experiences was digging over a 400 square foot garden in its entirety and turning it into a vegetable garden, much to the delight of his neighbors who all got free vegetables! It was through this experience that he discovered his love of gardening and started to learn more and more about the subject. His first encounter with a greenhouse resulted in a tomato infested greenhouse but he soon learnt how to make the most of a greenhouse and now grows a wide variety of plants from grapes to squashes to tomatoes and more. Of course, his wife is delighted with his greenhouse as it means the windowsills in the house are no longer filled with seed trays every spring. He is passionate about helping people learn to grow their own fresh produce and enjoy the many benefits that come with it, from the exercise of gardening to the nutrition of freshly picked produce. He often says that when youÃ¢â ¬â„¢ve tasted a freshly picked tomato youÃ¢â ¬â„¢ll never want to buy another one from a store again! Jason is also very active in the personal development community, having written books on self-help, including subjects such as motivation and confidence. He has also recorded over 80 hypnosis programs, being a fully qualified clinical hypnotist. He hopes that this book has been a pleasure for you to read and that you have learned a lot about the subject and welcomes your feedback either directly or through an review. This feedback is used to improve his books and

provide better quality information for his readers. Jason also loves to grow giant and unusual vegetables and is still planning on breaking the 400lb barrier with a giant pumpkin. He hopes that with his new allotment plot heÃ¢â ¬â„¢ll be able to grow even more exciting vegetables to share with his readers.

Perfect book for the beginning greenhouse gardener. Thank you.

great shipping and book

Awesome read and easy to understand.

This is a good little book.

Great!

I had made a previous review of this book with a low rating. The reason for my low rating was not the book itself, it turned out to be a technical issue that prevented me from seeing the content of the book. Customer Service took care of this problem once I got around to contacting them and I have now read through at least most of the book.This is a very informative book if you are considering getting a greenhouse. I had just set one up and had found a lot of great information about setting up your greenhouse. Fortunately I had done most things correctly. This book covers everything you will need to get started and more. Being new to having a greenhouse I still think that people who have had them for a while would still find useful tips in this book. It covers all of the basics and will more than prepare you to get started.

This book includes literally everything that you could possibly want to start/run a green house!!! I would definitely recommend. The author is amazing at telling you what to do through a book!

Really enjoyed reading this book. It will def be a go to book, especially before during & after building my greenhouse. There is so much info to cover. Good luck growing! Do they say...Go break a thumb! lol
