Synopsis

A readable, perceptive account of the lives of fourteen gifted innovators who have played important roles in scientific and industrial progress. The achievements of Benjamin Banneker, Granville T. Woods, George Washington Carver, and others have made jobs easier, saved countless lives, and in many cases, altered the course of history. Includes a bibliography and an index.

Customer Reviews

"This book does not merely decry injustice, it communicates the interest of each field of study, conveys the significance of the work of each in the field . . . An auspicious roster."--Kirkus Reviews

DR. LOUIS HABER had a long and distinguished career teaching science. An adjunct professor at Pace University and Lehman College, he held graduate degrees in both science and education. He died in 1988.

It was a short read. a compilation of interesting stories . I just wish there was more info about some of them, their personal story interested me most. I pass the book along to my little brother.Its an easy read for him but iI think Its a book filled with perfect examples how throughout history people have overcome adversity and still gave their all to accomplish their dreamsand their passions. Much respect to the inventors showcased in this book!

I liked this book and found it interesting. Full of little known facts about valuable research discoveries by African Americans. It would be a great book for high school or college level science and engineering majors.

Teaches Science and invention in the 19th and 20th century. Very interesting.

I found this book fascinating. I was unaware that so many of the things we take for granted each day are available to us because of the 14 black men whose information is available in this tome. I would highly recommend it to anyone, but especially to ALL science teachers!

This book is Ok. I expected more inventors along with better wrtten explanations of the invention.

I gave "Black Pioneers of Science and Invention" to a budding 13 year old scientist. I'm sure he will tell me all about it soon.

This book and simular books highlight the inventions in all areas(science, engineering, medicine...) of African Americans that increased the wealth and prosperity of the United States. However, these facts are not presented in United States History classes from elementary, to colleges,and universities. "This book traces the lives of black scientist and inventors who have made significant contributions in the various fields of science and industry." (Haber, introduction)This book and simular books should be rquireed reading in all elementary, college, and universities as part of the curriculum. So, the nation can have knowledge of how African Americans inventions in all areas (science, engineering, medicine...) contributed and enabled the wealth and prosperity of the the United States.

A must have for every black teenager to boots their ego,and personality
