Synopsis

A classic thriller from #1 New York Times bestselling author Michael Crichton, Sphere is a bravura demonstration of what he does better than anyone: riveting storytelling that combines frighteningly plausible, cutting-edge science and technology with pulse-pounding action and serious chills. The gripping story of a group of American scientists sent to the ocean floor to investigate an alien ship, only to confront a terrifying discovery that defies imagination, Sphere is Crichton prime - truly masterful fiction from the ingenious mind that brought us Prey, State of Fear, and Jurassic Park. Sphere was made into a film directed by Barry Levinson, which starred Dustin Hoffman, Sharon Stone, and Samuel L. Jackson.

This was my first Chrichton novel to experience as he’s been recommended to me for over a year now from family and I gotta say I absolutely loved Sphere. The plot was intriguing and involved a few intellectual concepts that went over my head but were none the less exciting. I enjoy a good sci-fi mixed with strange twists and great character development so I will definitely be finding another Michael Chrichton novel soon.

Michael Crichton has written many fantastic, can’t put them down stories that are full of suspense and focus. This novel starts out as most of his great books due, by pulling you into the drama excited by what’s coming next. But by the end the story, it loses the creatively that kept you absorbed, and fails to keep you interested by resorting to simple conclusion’s. I enjoyed the story but was disappointed with the ending.

My favorite novel. Great sci-fi story. The power of your thoughts and attitude shapes your world.

Without spoiling the details, I would say that this book has a very interesting premise that it utterly fails to capitalize on. From a technical standpoint, the writing is fine, the characters are well established, etc, but there's no satisfaction to be had from the events of the last third of the book.

Without revealing too much of the plot, this book was about a sphere of possibly alien origin that was discovered underwater, and how it affected a crew of scientists sent to investigate a crashed aircraft of some sort. It was quick-paced and well thought out. Even the technology was still advanced for this day and age. Definitely worth the read. Crichton seems to have done his research into psychology and how a psychologist would react in such a situation. It was also an interesting look into how the navy might have run at least in the 1980s.

This book is fantastic fun! I definitely recommend it as an adventurous and thoughtful read.

One of my favorite books, great read.
