On August 1, 2017, Bitcoin the popular cryptocurrency, Bitcoin split into two derivative currencies, Bitcoin Cash (BCH) and Bitcoin Classic (BTC). The origin of the split can be tracked back to 2010. During that time, as a spam control measure, a one megabyte per 10 minutes limit was introduced. The mechanism worked smoothly because the value of Bitcoin was low and trading was limited. However, once the popularity of the Bitcoin grown exponentially and become hugely popular, the one-megabyte limit started being a burden. Miners, users, and companies differ how to solve the problem. One side wanted the limit raised to match the growing demand of Bitcoin. Others argued that a rapidly growing Bitcoin will shift to corporate control and will get centralized. After years of argument, the Bitcoin Cash advocates decided to create a split of the Bitcoin ledger and see how the market reacts. I find Bitcoin to be very interesting because it’s not like your regular paper currency. It’s a digital currency that’s decentralized because there’s only a finite amount of it. I think Bitcoin is important to learn about because it involves our future in regards to money. It’s never too early to start securing your finances and get that in order. This book will really give you all the info you need on Bitcoin such as splitting and even some insights on the future of Bitcoin, which I thought was quite interesting. All-in-all I would say this is a solid book to invest in because you never know what could happen to the dollar one day, and it’s better to be prepared rather than not!

I have been discussing this one with my close friends and they are all but baffled with my curiosity with Bitcoin. They don’t really know much about it so I just did myself a favor and did some research, my peaked curiosity lead me to this and it didn’t fail me to answer questions in my head! I therefore conclude that being in the blockchain market is not for me for now but I would recommend this book because it’s detailed explanation and tips regarding investing or trading the most talked about digital currency.
