Synopsis

The book "Special Laser Pain Therapy" is of interest for all those who again and again question whether surgeries and the taking of medication, with the known risks and side effects, are the only options to treat pain. No, those should always be the last options. There are sustainable alternatives without side effects that should have priority. One of them is explained in this book in an easy to understand manner. The path to activating the own healing process and the laser light waves necessary for such for the "recharging of the batteries" in the affected body cells. Systematically, the reader is introduced to the context of a signal medicine of light quanta to understand in the end why for example pain afflicting joints can be remedied via these laser beams without changing the bone structure. In contrast to the infrared radiation of cutting surgery lasers, this is an infrared regeneration radiation that, among other things, also reaches earth via sunlight.
