Customer Reviews

Honestly I haven’t made any perfume yet but I love this book for the detailed and explicit information, and because it teaches how to make a professional (commercial style) perfume instead of most guides which a have that home craft approach which is fun but not as helpful if you’re trying to develop a repeatable product for sale. It teaches how to make oil based but also the alcohol

based perfumes you would buy in a store. Really a great reference. When my life calms down I'm looking forward to experimenting.

Base information, boring, and probably took 48 hours to write, with the author being a chemist he takes too much for granted, and is very numerical, they may be simple, but the formulations made me want to sign up for night class chemistry. Not for me, glad it was free.

This book gives you recipes using chemical fragrances and essential oil mixes. Doesn't really teach you how to make your own perfumes. The perfumes made are toxic and it is pointed out not to breath the products while mixing.

Helpful book ,give you a clear image about making perfume, you can consider it good start point to understand how to make perfume.

author sharing his recopies with readers :D

This book was chock full of typos and grammatical errors. It's cheap, so that's good, and it names a few resources in the back in case you didn't find them on your own. But the length is exaggerated by repetitive phrases and it feels more like a free high school pamphlet than something I should have payed for. Maybe the upcoming third edition will address this?

Straight to the point!
