Synopsis

Veterinary Technician’s Manual for Small Animal Emergency and Critical Care provides a comprehensive reference on emergency and critical care medicine for veterinary technicians of all skill levels. Beginning with information on initial patient assessment and triage, the first section covers shock and initial stabilization, venous access, monitoring, and cardiopulmonary cerebral resuscitation. A section on specific conditions such as cardiovascular and respiratory emergencies is organized by system, with a final section highlighting select topics like anesthesia and analgesia, transfusion medicine, and critical care pharmacology. Case studies, review questions, and images are provided on a companion website at www.wiley.com/go/norkus. Coverage focuses on dogs and cats, with special considerations for handling exotic and avian emergencies covered in a dedicated chapter. This in-depth material in an easy-to-navigate format is an essential resource for veterinary technicians and assistants, emergency and critical care veterinary technician specialists, and veterinary technician students.

Lots of typos and errors in this text, so buyer beware! Our class finds at least one or two errors each week in both the text book and the companion material on the web.

Was purchased as a gift for veterinary assistant studying for certification. She showed it to her supervisor and was told it was an excellent resource.

As a two decade licensed veteran, I found the book insightful and useful in many ways. The author’s appendix summarizing pharmacology is fantastic.

Thorough and well written. I haven’t yet finished reading but thus far it seems to be a fine title. Writing style differences are apparent from chapter to chapter which are handled by different contributing authors.

all good

I have gotten a lot of use out of this book at work and as a study guide. I love continuing my education in any way possible, and this book has been a great way to do just that. It is easy to navigate and has way more info than I expected. I would recommend this to any Veterinary Technician who wants a great guide to emergency and critical care.

I am impressed by how ambitious this text is w/several detailed chapters. The CV chapter explains complex systems very well. I would just advise careful reading as I have noticed some mistakes. The Critical Care Pharmacology chapter is great, but there are 2 mistakes in the medical calculation section, a Glyco dose answer is incorrect, and one should use subtraction not multiplication in a fluid additive question on step 1, p 427. There are also significant spelling errors/typos throughout. Overall though, a very good text.

This book is great, and contains a *lot* of great information. If you’re looking to work in an emergency clinic, I would highly suggest purchasing this book.
