Customer Reviews

The expectancies published in this book are nothing but statistical manipulations of data from multiple sources. I firmly believe in the KISS principle; that the most accurate results come from the source data and with a minimum of statistical manipulation. Some of the life expectancies are based on a small sample of the population from biased sources such as life insurance companies.The standard reference for life expectancy is the U.S. Life Tables of the National Center for Health Statistics and they are available on line for free. The standard reference for work life expectancy is the employment participation rates from the Current Population Survey and they are available on line from the Census Bureau for free. KISS!
