I purchased this book assuming it would be aesthetically identical to prior editions but with better content, thus justifying its high cost, but I was mistaken. I have owned many previous editions of this toxicology reference book, always being impressed by its unparalleled scope and authoritativeness in the toxicology profession but this particular edition (11th) is very unsatisfying to own because it was printed on very thin cream colored paper. The thinnest of the paper is a result of trying to keep

the newest edition the same size as previous editions while adding more content but the end result are pages that feel fragile like wrapping paper so I doubt they will hold up over time. The cream colored pages make it extremely difficult to read the small print. The bottom line is that if you are in the medical or forensic toxicology profession, then you pretty much have to buy this book anyway for your reference library regardless of the high purchase price. However, I'm letting you know in advance that the compromises which the authors made to keep this edition the same size as prior editions have made the book far less appealing to own and more difficult to read. I haven't owned the book long enough to compare content with prior editions. In summary, I have buyers remorse in the sense that my expectations were not met, based on my overwhelmingly positive response to prior editions of this book. I'm stuck with the 11th edition and now I need to make the best of it.

Great book. Arrived promptly.

Marvelous 11th ed. As always, the added information is as close to date as can be expected. I find that the cream colored Bible paper stock is much easier on the eyes. As with any voluminous reference volume (i.e. PDR) this is certainly not intended to be read cover to cover. I applaud any mind that is able to do so (although this might be an extremely healthy alternative to Xanax, hmmm?). Invariably, I go straight to what I'm looking for (with its pragmatic index), and as with the past few editions, I pop it in the copier and blow it up to an 8 1/2 x 11 to keep with case files. I think I've even figured out now how to take a picture with my phone and enlarge it (all qualifying Copyright laws being adhered to of course). Not a problem for me, personally. Great job. Congratulations on and THANK YOU for another priceless update to this never ending compilation of data.
